

Chemical and hazardous goods logistics.

Safe, green and flexible.

DB Schenker BTT GmbH is your one-stop logistics provider for chemical and hazardous goods transports. We develop customized transport concepts for your sensitive freight in cooperation with the DB Schenker Rail Business Unit Chemicals/Mineral Oil/Fertilizers.

The European network established by DB Schenker Rail is among the largest, safest and most environmentally friendly transport systems in the world. Our rail network thus forms the basis for a full range of single-car transport options. By continuously expanding this network, we are increasing the competitiveness of rail transport as compared to other modes of transport.

For customers without a siding of their own, we offer flexible, cross-carrier solutions in intermodal transport. We organize the main leg by rail, transshipment in the terminal as well as pre-carriage and onward carriage by road for all European routes.

Chemical industry:
DB SCHENKERchem-solution

Delivering solutions.

DB SCHENKER *chem-solution*.

You benefit from our industry expertise.

We developed our dedicated product DB SCHENKER *chem-solution* specifically to meet your needs in time-sensitive single-car transports. Our European single-car network is your link between the production and processing sites of the chemical industry.

We develop integrated logistics solutions for our customers to ensure safe, punctual delivery of their freight to its destination – at attractive conditions. Take advantage of the benefits and opportunities offered by DB SCHENKER *chem-solution* in single-car transport:

Reliability. We attach special importance to safety, reliability and speed.

- We optimize traveling time and thus improve the punctuality of our connections, even overnight on many routes.
- Quotas can be booked for special prioritization of transports. All transports in the DB SCHENKER *chem-solution* network have a set standard transit time on national and international routes.

Planning security. We coordinate and monitor all transports through our professional transport management service.

- Our full-coverage transport monitoring solution creates transparency in your supply chains, enabling you to plan better and improve use of resources.
- Proactive customer information is a matter of course for us. We provide you with regular updates on the transport status of your rail cars.

Safety and service. Safety and reliable service are top priorities in the transport of hazardous goods and sensitive products.

- Our competent, experienced employees and intelligent quality management take the worry out of hazardous materials shipments for you.
- Our sector-oriented service team is available 24 hours a day.
- Plus: just in case, our highly professional emergency management team is always ready to take action.

Maximum ordering flexibility. The DB SCHENKER *chem-solution* service portfolio is clearly structured and provides maximum ordering flexibility for regularly scheduled transports and transports on short-term notice on changing routes.

- You can place your order with us up to two hours before pick-up; there is no minimum volume limit and no obligation to make reservations.
- Pick-up times can be designated as needed in keeping with an individual service plan.

Single-car transports throughout Europe.

You benefit from our network.

In order to keep pace with the rapidly growing importance of the chemical industry, we are continually developing our dedicated product DB SCHENKER *chem-solution* and expanding our single-car network.

Our own companies abroad, cooperation agreements with other European state railroads and in some cases with private providers in other countries enable us to operate a comprehensive, cross-border single-car network in Europe.

DB SCHENKER *chem-solution* also serves the neighboring European countries of the Netherlands and Belgium with the ports of Rotterdam and Antwerp. Further national and international expansion is already underway or in planning.
